

# AREA CONTROL SURVEILLANCE (ACS)

## COURSE SUMMARY - EU 2015/340

Challenging and advancing training solutions, GATE Aviation Training uses modern learning principles and proven pedagogical techniques to provide candidates with high-class theoretical knowledge and practical skills necessary to receive a Student Air Traffic Controller license.

The course is divided into training phases based on a blended theoretical- and practical training methodology, supporting the candidates transfer of theoretical knowledge into practical skills.

Simulation during the course is performed in a state-of-the-art 2D Radar Simulator including IFR and VFR aircraft movements which will gradually increase in the degree of difficulty and complexity.

The training course and simulator exercises can be customised to simulate the airspace and requirements of an Air Navigation Service Provider. It optimises the candidate's level for a faster transition time to the real-life environment – please contact us for options.

GATE Aviation Training academy and the Area Control Surveillance Training Course are certified by the Danish Civil Aviation Authority in accordance with Commission Regulation (EU) 2015/340.

## PREREQUISITES

- Successful completion of a Commission Regulation (EU) 2015/340 Basic Training Course

## COURSE CONTENT

- Theoretical topics in accordance with Commission Regulation (EU) 2015/340 such as Aviation Law, Navigation, Human Factors etc.
- Simulation exercises in an Area Control Surveillance environment
- Study visit to an area control unit
- Language Assessment in accordance with (EU) 2015/340

Course Duration  
**12 - 15 WEEKS**

Group Size  
**3 - 12**

Course Dates  
**CALL FOR DETAILS**

### Who should attend the course?

The objective of our Area Control Surveillance (ACS) Training Course is to enable the successful candidate to receive a Student Air Traffic Controller license for Area Control.
