

AERODROME CONTROL INSTRUMENT (ADI)

COURSE SUMMARY - ICAO

The candidate at the centre of our training concept, we use modern learning principles and proven pedagogical techniques to provide candidates with high-class theoretical knowledge and practical skills necessary to receive a Student Air Traffic Controller license.

The course is divided into training phases based on a blended theoretical- and practical training methodology, supporting the candidates transfer of theoretical knowledge into practical skills.

Simulation during the course is performed in a state-of-the-art 3D Tower Simulator including IFR and VFR aircraft movements which will gradually increase in the degree of difficulty and complexity.

The training course and simulator exercises can be customised to simulate any airport around the world. It optimises the candidate's level for a faster transition time to the real-life environment – please contact us to discuss options.

GATE Aviation Training academy is certified by the Danish Civil Aviation Authority in accordance with Commission Regulation (EU) 2015/340.

PREREQUISITES

- Successful completion of an ICAO compliant Basic Training Course

COURSE CONTENT

- Theoretical topics in accordance with Commission Regulation (EU) 2015/340 such as Aviation Law, Navigation, Human Factors etc.
- Simulation exercises in an Aerodrome Control Instrument environment
- Familiarisation visit to an Aerodrome Control Tower
- Language Assessment compliant with ICAO regulations

Course Duration
8 - 12 WEEKS

Group Size
3 - 12
