

ON THE JOB TRAINING INSTRUCTOR REFRESHER

COURSE SUMMARY - EU 2015/340

GATE Aviation Training (GATE) has designed a new OJTI refresher training course that places the OJTI at the centre of the training concept. We use modern learning principles and proven pedagogical techniques to help OJTIs to develop personally and to refresh their knowledge and pedagogical skills necessary, enabling the revalidation of their OJTI endorsement.

The training course is designed to refresh the participants understanding of learning theories used in a modern, pedagogical and appreciative learning environment. GATE has added topics such as future digitalisation within the industry and introducing important discussions on new teaching methods.

We believe the future learning methods and technologies are important for the development of OJTIs and the learning environments. For the same reason, the course includes simulator exercises which focus the participants on establishing an optimal learning environment from a learning and motivational point of view.

The OJTI refresher training course is delivered at our academy or alternatively at customer site – please contact us to discuss options.

GATE Aviation Training academy and the OJTI refresher training course are certified by the Danish Civil Aviation Authority in accordance with Commission Regulation (EU) 2015/340.
