

AIS TO AIM BASIC TRAINING

COURSE SUMMARY

This course provides participants with an overview of Aeronautical Information Management (AIS) and its evolution from AIS to Aeronautical Information Management (AIM).

The theoretical part of the training (3 days) will give participants a vital knowledge of the AIS/AIM domain, specifically:

- AIM products and services and their ICAO and EU reference documents and regulations
- Transition from AIS to AIM in the context of ICAO Road Map
- Digital data sets defined by Commission regulation
- Aeronautical Information Exchange Model AIXM 5.1
- Digital NOTAM

Within the practical part of the training (1 day), participants will gain the essential skills to create digital data sets in AIXM 5.1, defined by applicable legislation and will understand the concept of digital NOTAM creation & use.

The course is provided in cooperation with NG Aviation, a company with professional background/ extensive experience in the digitization of the aviation industry, especially of Aeronautical Information.

The NG Aviation team of instructors, who provide this course are experts from all key areas of the air traffic management industry.
